## Time Series : Simple Moving Average method

In the simple moving average models the forecast value is

$$F_{t+1} = \frac{A_t + A_{t-1} + \dots + A_{t-n}}{n}$$

$t$  is the current period.

$F_{t+1}$  is the forecast for next period

$n$  is the forecasting horizon (how far back we look),

$A$  is the actual sales figure from each period.
